Experience & impeccable reputation

Match-Trade Technologies is a leading brokerage business technology provider and creator of the award -winning trading platform, the Match-Trader.

Operating in the Forex industry since 2013, we have open several offices and developed a network of representatives around the world (Cyprus, Poland, UAE, Malaysia, Indonesia, India, USA, South Korea).

We understand the specifics of local markets, therefore we know there is no one-size-fits-all solution. Our proprietary technology can be tailored to the needs of diverse clients and traders from different regions.

Match-Trader, our proprietary trading server is a fully fledged platform or can serve as back-end technology providing connection to any front end. Broad ecosystem of ready-made

integrations and variety of APIs allow to fit Match-Trader into any existing ecosystem.

Through our strategic partnership with Match-Prime Liquidity, a CySEC regulated liquidity provider, Brokers can leverage seamless access to deep liquidity across multi-asset instruments.

Ecosystem. Platform designed to **plug&play**

Ready-made integrations

Match-Trader platform is already integrated with the most popular Prop CRMs, including biggest CRM providers owning Match-Trader servers to sell own WL platforms.

APIs & step-by-step support

The wide range of available APIs followed by dedicated support allows our clients to easily integrate every system necessary to introduce challenges feature.

One Platform. Multiple solutions.

Match-Trader - trading platform for Prop Firms

Offer your clients the best trading experience with an industry-renowned trading platform already integrated with the most popular Prop CRMs or connect your own system using our APIs.

Back-end Technology for Prop Platforms

Match-Trader system is also available as a standalone back end technology allowing Prop Brokers to craft their own custom front end.

All-in-one Prop Trading solution

In response to the growing demand for a solution tailored to challenge-based trading and built-in performance statistics dashboards, the Match-Trader team has developed its own Prop Trading solution including Prop Broker CRM (currently in beta testing).

TradingView platform

Match-Trader platform is already integrated with an entire TradingView interface enabling Prop firms to implement the world's most popular charting platform into their offer.

# Match-Trader Platform - seamless Prop Trading experience

Prop widget

When opening a Prop Trading Account type, the default platform view shows a widget containing crucial information about performance, such as profit target, max daily loss, and max loss, as well as a Calendar of market events and Top Movers instruments.
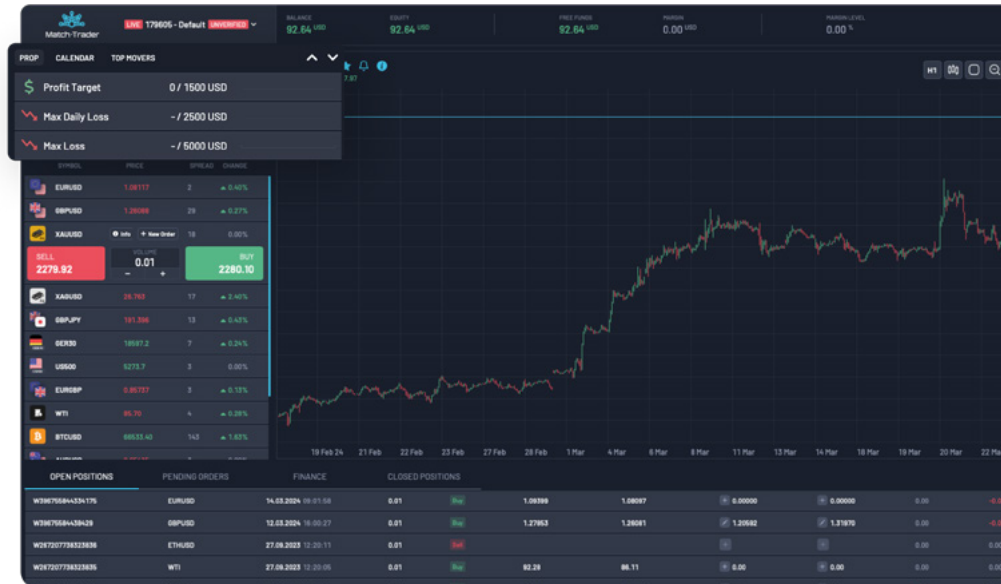

Challenges tab

Makes it easier to choose a challenge by pre-selecting using parameters such as the number of phases, currency, and account size. Each challenge has detailed information, including initial leverage, period, goals, and profit split. Thanks to various connected payment methods, one can pay for the selected challenge directly from the platform.
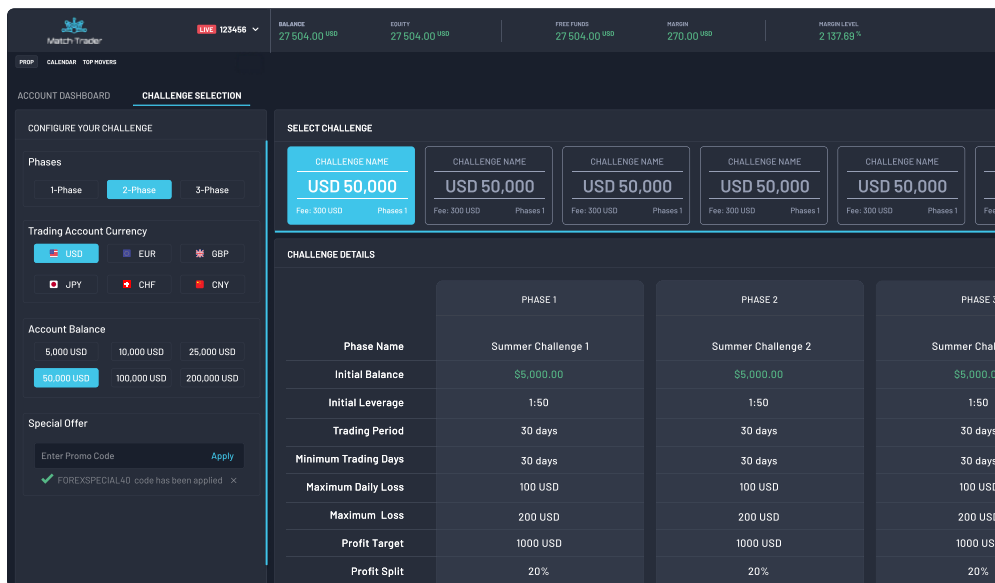

Account Dashboard

Gathers detailed information regarding the trader's activity to track performance in real-time and make decisions for better challenge management easier.

- Account Details showing activity status, initial balance, and ongoing phases with dates.
- Balance Chart to trace changes over time.
- Daily Loss Limit with details and a time countdown.
- Trading Goals indicate nominal values and the percentage of goal achievement for maximum daily loss, maximum loss, and profit target. After reaching the set goals, one can immediately proceed to the next phase.
- Statistics showing average results for the number of trades, profit, loss, and win ratio.
- Daily Summary of trades with lots and results for each order.
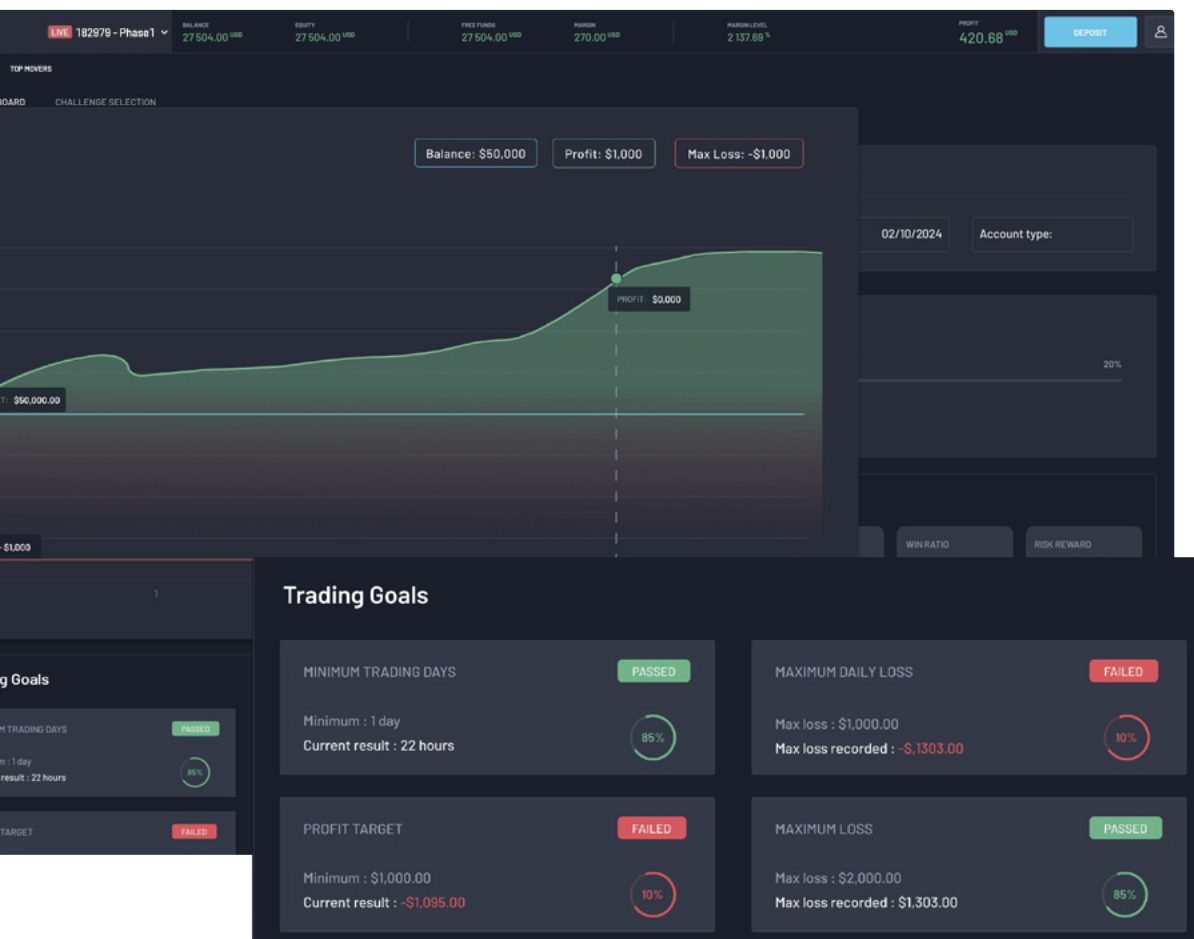

Prop accounts and **challenges management** for Brokers

Challenge Statistics

Clear charts make it easier to summarise the value of collected fees, traders' payouts, the number of new participants, and the percentage of participants who met their goals.

They also provide a set of detailed information (including performance statistics) about each account participating in the challenge. Statistics can be filtered by a date range for convenient report creation.

Challenge Configuration

This tab is used to create and set new challenges. Each new challenge is assigned to a selected branch and has a designated currency, fees, and requirements regarding KYC verification or inclusion in statistics.

For each challenge, the Broker sets the number of phases (indicating which are funded) and detailed parameters regarding the initial balance, leverage, trading period, including minimum trading days, max loss, profit target, and profit split between the Broker and the Client.

The most **mobile-friendly** platform

Match-Trader platform was developed using cutting-edge **Progressive Web App technology** to guarantee the app will be always available, **on any device**.

Mobile-focused Technology

Match-Trader looks and acts exactly like a native app but is a web-based platform that seamlessly adapts to screen's resolution.

Perfect to trade on-the-go

Traders can switch between devices and keep all of their operations as they're always logging in to the same account be it web, mobile or desktop platform.

No need to download the app

Traders don't have to download anything. It's enough to visit Broker's website and add a shortcut to home screen for a native app-like experience.

Broker's own branded app

Each Match-Trader Broker gets their own app with custom logo and name to build brand awareness across trading community.

Available in app stores

Match-Trader platform allows Brokers to list their branded app in app stores on their own developer account for credibility and maximum exposure.

Guaranteed accessibility

PWA technology enables having diverse sources for trading apps to secure access for mobile users. The app is always accessible on any smartphone (Android, iOS, Windows) via browser.

Back-end technology to create your own platform

Our proprietary back-end technology is now available as a **standalone solution**.

Any Broker interested in building their own platform can streamline the entire process by connecting their custom-made front end to our proprietary matching engine **proven to support up to 200,000 accounts** without a drop in performance.
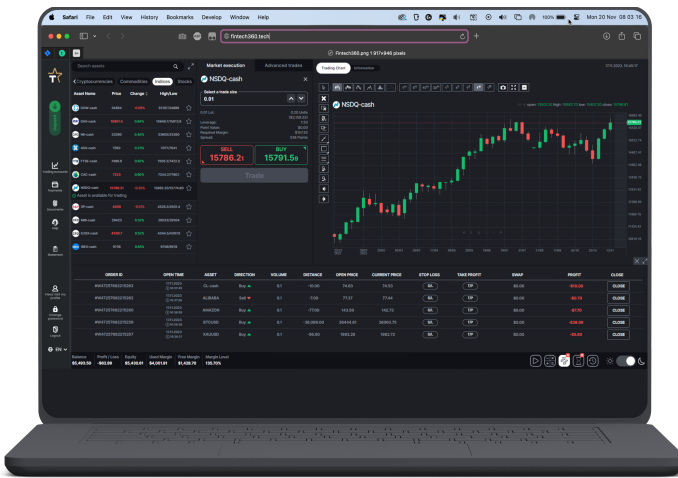

Leveraging reliable back-end technology from a trusted partner is the most efficient and cost-effective way for Brokers to build their own platform

- lower development cost
- faster time-to-market
- reliability and scalability
- more resources for front end
- no back-end system maintenance
- increased operational efficiency

Get a competitive edge with the ⊺⁄ TradingView integration

Take advantage of a seamless connection to TradingView - the world's famous charting platform used by over 50 million traders.

The ready-made integration between Match-Trader back-end technology and the entire TradingView interface, including an array of charts, over 100 technical indicators and more than 90 drawing tools, provides a full-fledged trading solution that guarantees reliability and diversity of trading experience for your clients.
